## Sobre o autor

TONY SINTES trabalha com tecnologias orientadas a objetos há sete anos. Nesse tempo, Tony fez parte de muitos trabalhos de desenvolvimento orientados a objetos de larga escala. Atualmente, Tony trabalha na First Class Consulting, uma empresa que fundou para ajudar as grandes

empresas a integrar seus diversos sistemas em uma estrutura unificada. Antes de iniciar a First Class Consulting, Tony trabalhou na BroadVision como consultor sênior, onde ajudou a construir alguns dos maiores sites Web do mundo. Atualmente, as principais responsabilidades de Tony são como arquiteto, líder técnico e mentor da equipe, ajudando a construir as habilidades em desenvolvedores menos experientes.

Tony é um autor técnico amplamente reconhecido, cujos trabalhos têm aparecido na *JavaWorld*, *Dr. Dobbs's Journal*, *LinuxWorld*, *JavaOne Today* e *Silicon Prairie*, onde é co-autor de uma coluna mensal altamente respeitada sobre programação orientada a objetos. Atualmente, Tony escreve a coluna mensal de perguntas e respostas da *JavaWorld*. Você pode entrar em contato com ele no endereço [styoop@firstclassconsulting.net](mailto:styoop@firstclassconsulting.net).

## Agradecimentos

Escrever um livro é um processo como nenhum outro. A quantidade de pessoas que colaboram em um livro, e que são necessárias para produzir a cópia final que você está lendo agora, é simplesmente espantoso. Gostaria de estender minha gratidão à equipe inteira de editoriais da Sams.

Sem seu trabalho árduo, este livro simplesmente não existiria.

Pelo nome, gostaria de agradecer a Michael Stephens, Carol Ackerman, Tiffany Taylor e George Nedeff. A liderança e toques sutis de Carol foram o que realmente fizeram este livro prosseguir até sua conclusão. A capacidade de Tiffany de estruturar e encadear o material técnico, clara e concisamente, é simplesmente espantosa. Não apenas as edições de Tiffany tornaram este livro mais legível, mas acho que seu trabalho me ensinou algumas lições valiosas sobre redação técnica. Também gostaria de agradecer a William Brown. William entrou em contato comigo a respeito do projeto STY OOP, no início de agosto de 2000. Confiar tal projeto a um autor relativamente desconhecido era arriscado e agradeço a William por me dar a chance de escrever este livro.

Agradeço especialmente aos editores técnicos, Mark Cashman e Richard Baldwin, que garanti-

ram que o material apresentado fosse tecnicamente bom. Agradeço a vocês pela atuação técnica.

Aos meus colegas, muito obrigado. Gostaria de estender os agradecimentos especiais a David Kim e Michael Han. Eu comecei este livro enquanto estava na BroadVision e gostaria de agradecer a David Kim por me permitir aquelas férias de pânico, quando os prazos de entrega começaram a se aproximar. Também gostaria de agradecer a Michael Han, por suas idéias técnicas e por escrever o apêndice sobre Java deste livro.

Por último, mas não menos importante, tenho o privilégio de agradecer à minha maravilhosa esposa, Amy, por seu apoio firme, revisão e paciência. Agradeço ainda à minha família e amigos, que ofereceram seu apoio e que ouviram minhas reclamações.

**Snow666**

## Diga-nos o que você acha!

Como leitor deste livro, *você* é nosso crítico e colaborador mais importante. Valorizamos sua opinião e queremos saber o que estamos fazendo corretamente, o que poderíamos fazer melhor, sobre quais áreas você gostaria de nos ver publicando e qualquer outra sugestão importante que

deseje passar para nós.

Receberemos com satisfação seus comentários. Você pode enviar um fax, e-mail ou escrever diretamente, para que possamos saber o que gostou ou não neste livro — assim como o que podemos fazer para tornar nossos livros melhores.

Por favor, entenda que não podemos ajudá-lo em problemas técnicos relacionados ao assunto deste livro e que, devido ao grande volume de correspondência que recebemos, não possamos responder a todas as mensagens.

Quando você escrever, certifique-se de incluir o título e o autor deste livro, assim como seu nome e número de telefone ou fax. Examinaremos seus comentários cuidadosamente e os compartilharemos com os autores e editores que trabalharam no livro.

#### **Apêndice E Listagens do código do jogo vinte-e-um 591**

blackjack.core	592
blackjack.core.threaded	619
blackjack.exe	621
blackjack.players	627
blackjack.ui	635
blackjack.ui.mvc	636
blackjack.ui.pac	649

#### **Índice Remissivo 669**

```
        monthlyQuota = quota;
    }
    public int getTransactionCount() {
        return transactionCount;
    }
}
```

---

Finalmente, `OverdraftAccount`, na Listagem 5.11, herda diretamente de `BankAccount`. Entretanto, ela também adiciona métodos para configurar a taxa de juros de saque a descoberto e para aplicar quaisquer taxas de juros.

LISTAGEM E.3

BlackjackDealer.java (continuação)

```
// impossível no estado de aposta
}
public void handPlayable() {
    // impossível no estado de aposta
}
```

```

public void handBlackjack() {
    // impossível no estado de aposta
}
public void handBusted() {
    // impossível no estado de aposta
}
public void execute( Dealer dealer ) {
    if( !betting_players.isEmpty() ) {
        Player player = ( Player )betting_players.get(0);
        betting_players.remove( player );
        player.play( dealer );
    } else {
        setCurrentState( getDealingState() );
    }
}

```

```

        setCurrentState().execute( dealer );
        // faz a transição e executa
    }
}

private class DealerBusted implements PlayerState {
    public void handChanged() {
        // impossível no estado de estouro
    }
    public void handPlayable() {
        // impossível no estado de estouro
    }
}

```

```

public void handBlackjack() {
    // impossível no estado de estouro
}
public void handBusted() {
    // impossível no estado de estouro
}
public void execute( Dealer dealer ) {
    Iterator i = standing_players.iterator();
    while( i.hasNext() ) {
        Player player = ( Player ) i.next();
        player.win();
    }
    i = blackjack_players.iterator();
}

```

```

    while( i.hasNext() ) {

```

#### LISTAGEM E.3 BlackjackDealer.java (continuação)

```

        Player player = (Player) i.next();
        player.blackjack();
    }
    i = busted_players.iterator();
    while( i.hasNext() ) {

```

```
        Player player = (Player) i.next();
        player.lose();
    }
}

private class DealerBlackjack implements PlayerState {
    public void handChanged() {
        notifyChanged();
    }
    public void handPlayable() {
        // impossível no estado de vinte-e-um
    }
    public void handBlackjack() {
```
